3.Run the Driver

# 1. Software description

This custom program is divided into four parts: basic setting, macro setting, advanced setting and LED setting

## 1- Basic Setting

Area A is the button function area, There are 7 buttons in total, all can be customized! In addition to the basic button functions, there are many commonly used function buttons for independent definition. Click any button and the following drop-down menu will appear:

The last few items have sub-menu function keys for selection, all of which are commonly used function keys and macro functions for daily computer operations. Each key can be independently defined. After selecting, click Apply to complete the setting! It is recommended that the first and third buttons do not set other function keys to prevent misoperation. After setting the function, click Apply in area B to confirm the function, or click Cancel to give up.

Area C is the quick setting area:  
 This software could save 4 profile. Gamer can save frequently used custom setting. Next time you open the software, you can directly select the desired configuration and click Apply instead of step-by-step settings. Designed for the convenience of consumers' memory, can be set independently! The configuration can be exported and stored, imported and used when needed, or restored to the initial configuration.

## 2 MACRO SETTING

Users can edit macros according to personal preferences and actual applications. This is a combination of mouse and keyboard functions. The setting steps are as follows:

- ① After right-clicking in the macro list box to call up the menu, create a new macro group

② Click the macro group, right click to create a new macro, and you can also right click this macro to rename it

③ Click the record button below to start recording your command.

④ Type the keys of your command on the keyboard, then click the stop to complete recording. (The arrow points downward means pressing the key, and upward means the key pops up.)

⑤ Correct the command in Key list. Right click the key or delay time, you can modify or delete those wrong command.

⑥ Insert mouse, LED, and other command. Click any key in key list, then click insert to open the menu, choose command you want insert.

All inserted command can be modified by right click it,LED could be edited in LED List.

⑦ Next, select the cycle option

⑧ After editing the macro, you can go to the basic settings for function configuration. Click the button you want to set the macro function → select the macro in the drop-down box → Select the macro just now → click the apply button → the function of the button becomes a macro, click the button to use it.

## WHAT IS PUBG

The pubg function is specially customized for the game PUBG. You can set the firing data for 11 different game guns according to your own usage habits

① Pointer precision  
Adjust the speed of the mouse pointer

## ② Wheel speed

Adjust the scrolling speed of the browse page when the scroll wheel rotates

## 3 Fire Speed

Adjust the speed of the left-click in the shortcut key (firepower key)

## 4 DPI

1. The DPI selection bar corresponds to 6 cool lighting effects: the color of the light can be adjusted through the color bar (16.8 million colors in total);

2. Each DPI selection bar has DPI value selection, only one can be selected;

3. Click the DPI option, you can set the corresponding DPI value and light color, or click the mouse DPI button, the DPI selection bar will automatically switch to the next one;

4. Check the active state, it means that the current selection bar is valid, otherwise it cannot be used!

## Backlight Setting

Click on the drop-down box on the right to choose from 14 lighting modes, cool and quiet, whatever you want.
